# 7120 ceramic cleaner

**Acidic cleaning solution for the removal of calx and cement residue.**

- **Removes calx, rust, cement residue etc from substrates.**

7120 ceramic cleaner is suitable for the removal of calx, grout and cement residue, rust etc from ceramic tiles, masonry, chromed and glazed sanitary ware etc. Not suitable for cleaning calcareous natural stone like limestone and marble. 7120 ceramic cleaner is diluted in water, after which the product is ready to be used. If necessary, the 7120 ceramic cleaner can be used as a concentrate. 7120 ceramic cleaner is available in 1L bottles.

## Product description

An acidic cleaning agent that contains water, sulfamic acid and aroma compound.

## Technical data

pH value (concentrated)	0,62
pH value (as a 1:2 solution)	0,91
pH value (as a 1:5 solution)	1,10
Recommended working temperature	10–25°C
Coverage/solution	1:2 with water

## Application areas

Suitable for use on all substrates that tolerate an acidic environment, both indoors and outdoors.

## Application

1 part mira 7120 ceramic cleaner is diluted in 2 parts water. On heavily soiled surfaces, use as a concentrate. Moisten the substrate with water, apply the cleaning agent and scrub into the surface with a sponge pad or other type of sponge. Let work for 2–5 minutes. Remove the cleaning agent, wash the surface and rinse thoroughly with clean water. Ensure that the dirt is completely removed. If possible, use a water vacuum.

## Working environment

The product is dangerous to eyes and skin. Wear protective gloves, protective clothing, eye protection and face protection. Reference the product safety datasheet.

## EU declaration

5–10% sulfamic acid  
<5% nonionic surfactant  
perfume

## Packaging

7120 ceramic cleaner is available in 1L bottles

## Storage and transportation

Transport and store safe from frost. Product will maintain technical specifications minimum 3 years after production date in unopened packaging

## Sales

mira products are available in well-equipped construction stores.
